

A

Typical Junction - Proposed Waiting Restrictions

- 10m of double yellow lines applied to protect sightlines and ensure access.

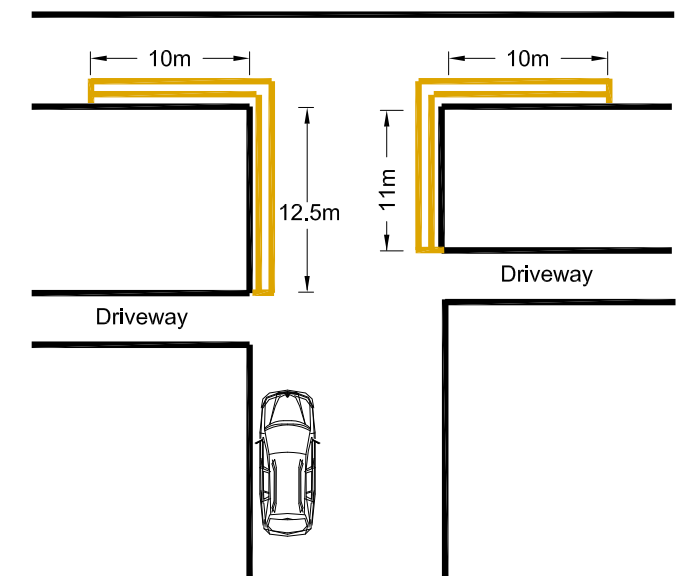

B

Typical Junction - Parking Problems

- However at times 10m of restriction can create other issues, such as overhanging driveways

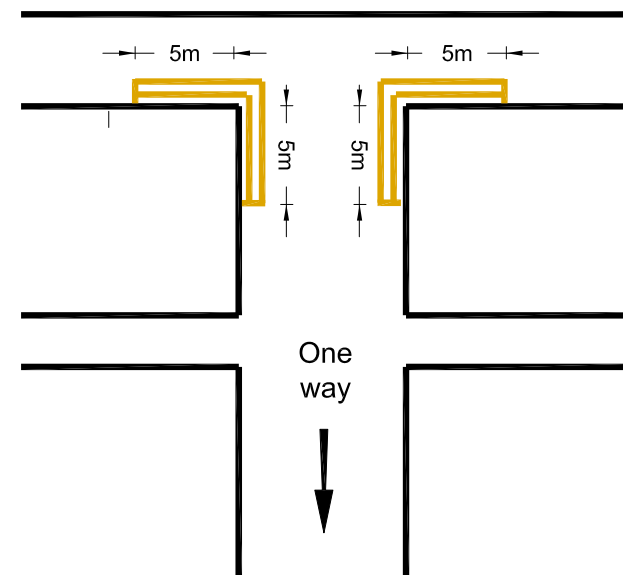

C

Site Specific Design

- Site specific measurements applied to extend restrictions to nearby driveway
- 12.5m return to one side to extend to driveway and 11m to other.
- Previous access problems & overhanging driveway (shown in Diagram B) prevented by a minor variation in restriction length

D

One way access

- Only 5m is normally required as a vehicle will not be met by another travelling in the opposite direction
