

One way onto Main Road

- Sightlines still protected & visibility kept clear by 10m of restrictions on Main Road
- 5m only required on one way access

Typical Junction With Higher Speeds

- At a junction joining a road with higher average speeds and/or high traffic flows, 10m might not be appropriate
- In such instances an extended length of restriction may be required, to protect sight lines and visibility of oncoming vehicles

Wide Mouth Junction

- The typical 10m length of yellow lines is taken from the give way location at the junction
- However, such restrictions may need to be extended to prevent vehicles parking on the mouth of the junction
