
Decision Maker: DEVELOPMENT CONTROL COMMITTEE

Date: Thursday 4th April 2019

Decision Type: Non-Urgent Non-Executive Non-Key

Title: LB BROMLEY FIVE YEAR HOUSING LAND SUPPLY PAPER APRIL 2019

Contact Officer: Claire Glavin, Planner
Tel: 0208 313 4477 E-mail: Claire.Glavin@bromley.gov.uk

Chief Officer: Chief Planner

Ward: (All Wards);

1. Reason for report

- 1.1. The Council usually considers an updated five year housing land supply paper annually in line with Government guidance. The last paper was agreed by Development Control Committee on 16th November 2017 and therefore an update is due to be considered.
- 1.2. An initial update on the Council's 2017 position was reported to DC Committee in November 2018 and Members agreed that the November 2017 position should be extended in the short term until the next Paper was considered. This was so relatively recent publications of the new National Planning Policy Framework (NPPF) (at the end of July 2018) and National Planning practice Guidance (NPPG) (in September 2018) could be assessed because they include updated guidance on the compilation of five year housing land supply papers.
- 1.3. A draft Five Year Housing Land Supply Paper was due to be considered by Members on 6th February 2019. The meeting was cancelled in light of concerns relating to the deliverability of some of the housing supply components in the Draft Five Year Housing Supply Paper. Concerns regarding the draft Paper have been given due consideration. The Paper has been updated to incorporate further details relating to the monitoring of housing completions.
- 1.4. This report sets out the five year housing land supply position for the Council from 1st December 2018 – 30th November 2023. It concludes that there is a deliverable five year housing land supply in the Borough.

2. **RECOMMENDATION(S) that: -**

- 2.1 **Members agree the five year housing land supply position 01/12/18-30/11/23 as set out in Appendix 1 of this report.**

Impact on Vulnerable Adults and Children

1. Summary of Impact: No impact
-

Corporate Policy

1. Policy Status: Existing Policy:
 2. BBB Priority: Quality Environment Safe Bromley Vibrant, Thriving Town Centres Regeneration:
-

Financial

1. Cost of proposal: No Cost:
 2. Ongoing costs: Not Applicable:
 3. Budget head/performance centre: Planning Division Budget (Excl. Building Control Land Charges & Renewal)
 4. Total current budget for this head: £1.388m
 5. Source of funding: Existing controllable revenue budget for 2018/19
-

Personnel

1. Number of staff (current and additional): 50ftes
 2. If from existing staff resources, number of staff hours:
-

Legal

1. Legal Requirement: Statutory Requirement:
 2. Call-in: Not Applicable:
-

Procurement

1. Summary of Procurement Implications: No implications
-

Customer Impact

1. Estimated number of users/beneficiaries (current and projected): All residents in the Borough as well as those making planning applications for development in the Borough.
-

Ward Councillor Views

1. Have Ward Councillors been asked for comments? No
2. Summary of Ward Councillors comments: N/A

3. COMMENTARY

Background

- 3.1 The Council usually considers an updated five year housing land supply paper annually in line with Government guidance. The last paper was agreed by Development Control Committee on 16th November 2017.
- 3.2 An initial update on the Council's 2017 position was reported to DC Committee in November 2018 and Members agreed that the November 2017 position was extended in the short term until the next Paper was compiled. This was so relatively recent publications of the new National Planning Policy Framework (NPPF) (at the end of July 2018) and National Planning practice Guidance (NPPG) (in September 2018) could be assessed because they include updated guidance on the compilation of five year housing land supply papers.
- 3.3 In light of the slight delay in reporting the housing land supply position the base date of the five year period will commence in December 2018 rather than April 2018. This helps to reflect the later date of its preparation.

A draft Five Year Housing Land Supply Paper was due to be considered by Members on 6th February 2019 but the meeting was cancelled. Concerns were raised in relation to the deliverability of a number of housing components in the Paper (for example; adopted site allocations, sites where some unit completions have taken place to date, the small site allowance and outline planning applications). Concerns regarding the draft Paper have been given due consideration and officers are satisfied that the components should be included and are in accordance with planning policy guidance and the recent Inspector's Report into the Local Plan.

The Paper has been updated to incorporate further details relating to the monitoring of housing completions and sites where completions have already been recorded for some units within those sites.

Relevant policy background to five year housing land supply

- 3.4 Set out below are key elements of the relevant planning policy background relevant to the compilation of the Council's five year housing land supply (5YHLS) for information.
- 3.5 Government guidance on 5YHLS has been updated in the past year through the publication of the revised National Planning Policy Framework (February 2019) and National Planning Practice Guidance (September 2018, February 2019) and provides more detailed guidance on five year housing land supply matters.
- 3.6 Paragraph 11 of the NPPF entitled 'The Presumption in favour of sustainable development' sets out how plans and decisions should apply a presumption in favour of sustainable development. Clauses c) and d) set out that in decision-taking this means:

"c) Approving development proposals that accord with an up-to-date development plan without delay;

or

d) where there are no relevant development plan policies, or the policies which are most important for determining the application are out-of-date (footnote 7), granting permission unless:

- i the application of policies in this Framework that protect areas or assets of particular importance provides a clear reason for refusing the development proposed (footnote 6); or*
- ii any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.”*

3.7 Footnote 7 of the Framework sets out the following; *“This includes, for applications involving the provision of housing, situations where the local planning authority cannot demonstrate a five year supply of deliverable housing sites (with the appropriate buffer, as set out in paragraph 73); or where the Housing Delivery Test indicates that the delivery of housing was substantially below (less than 75% of) the housing requirement over the previous three years. Transitional arrangements from 2018 - 2020 for the Housing Delivery Test are set out in Annex 1.”* (paragraph 215 of the Framework).

3.8 Paragraph 73 states that Local planning authorities should identify and update annually a supply of specific deliverable sites sufficient to provide a minimum of five years’ worth of housing against their housing requirement set out in adopted strategic policies (deliverable sites for Travellers to be assessed separately) or against their local housing need where the strategic policies are more than five years old (unless these strategic policies have been reviewed and found not to require updating. Where local housing need is used as the basis for assessing whether a five year supply of specific deliverable sites exists, it should be calculated using the standard method set out in national planning guidance – underlined added in updated Feb NPPF 2019). The supply of specific deliverable sites should in addition include a buffer (moved forward from late in the plan period) of:

a) 5% to ensure choice and competition in the market for land; or

b) 10% where the local planning authority wishes to demonstrate a five year supply of deliverable sites through an annual position statement or recently adopted plan (a plan adopted between 1 May and 31 October will be considered recently adopted until 31 October of the following year; and a plan adopted between 1 November and 30 April will be considered recently adopted until 31 October in the same year – Footnote 38) to account for any fluctuations in the market during that year; or

c) 20% where there has been significant under delivery of housing over the previous 3 years, to improve the prospect of achieving the planned supply (From November 2018 this will be measured against the Housing Delivery Test where this indicates that delivery was below 85% of the housing requirement).

3.9 Annex 2 of the Framework defines Deliverable as set out below, incorporating amendments in the February 2019 NPPF that make reference to non-major outline planning applications. It also specifically refers to sites with outline planning permission or an allocation in a development plan:

'Deliverable: *To be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years. In particular:*

a) sites which do not involve major development and have planning permission, and all sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years (for example because they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans).

b) where a site has outline planning permission for major development, has been allocated in a development plan, has a grant of permission in principle, or is identified on a brownfield register,

it should only be considered deliverable where there is clear evidence that housing completions will begin on site within five years.'

- 3.10 Paragraph 74 specifies that a five year supply of deliverable housing sites, with the appropriate buffer, can be demonstrated where it has been established in a recently adopted plan, or in a subsequent annual position statement which:
- a) has been produced through engagement with developers and others who have an impact on delivery, and been considered by the Secretary of State; and
 - b) incorporates the recommendation of the Secretary of State, where the position on specific sites could not be agreed during the engagement process.
- 3.11 The Framework advises in paragraph 75 that to maintain the supply of housing, local planning authorities should monitor progress in building out sites which have permission. Where the Housing Delivery Test indicates that delivery has fallen below 95% of the local planning authority's housing requirement over the previous three years, the authority should prepare an action plan to assess the causes of under-delivery and identify actions to increase delivery in future years.
- 3.12 Paragraph 70 of the Framework states that where an allowance is to be made for windfall sites as part of anticipated supply, there should be compelling evidence they will provide a reliable source of supply. Any allowance should be realistic having regard to the strategic housing land availability assessment, historic windfall delivery rates and expected future trends. Plans should consider the case for setting out policies to resist inappropriate development of residential gardens, for example where development would cause harm to the local area.

NATIONAL PLANNING PRACTICE GUIDANCE (NPPG) (September 2018 and February 2019)

Housing Need Assessment (February 2019)

- 3.13 Clarification is provided in paragraph 002 of the PPG that the standard method for assessing local housing need uses a formula to identify the minimum number of homes expected to be planned for, in a way which addresses projected household growth and historic under-supply. The guidance states that the standard method identifies a minimum annual housing need figure and does not produce a housing requirement figure.
- 3.14 Guidance is given in paragraph 013, in relation to the calculation of local housing need where plans cover more than one area, in particular where strategic policies are being produced jointly, or where spatial development strategies are prepared by elected Mayors, or combined authorities with strategic policy-making powers. In such cases the housing need for the defined area should at least be the sum of the local housing need for each local authority within the area. It will be for the relevant strategic policy-making authority to distribute the total housing requirement which is then arrived at across the plan area. Where a spatial development strategy has been published local planning authorities should use the local housing need figure in the spatial development strategy and not seek to re-visit the local housing need figure when preparing strategic and non-strategic policies.
- 3.15 Paragraph 016 of the PPG states that there is separate guidance on how the standard method for assessing local housing need applies to calculating 5 Year Land Supply and the Housing Delivery Test. The guidance links to the PPG on housing and economic land availability assessment (September 2018).

Housing and economic land availability assessment (September 2018)

- 3.16 Paragraph 028 sets out that a 5 year land supply (5YHLS) is a supply of specific deliverable sites sufficient to provide 5 years' worth of housing against a housing requirement set out in adopted strategic policies, or against a local housing need figure where appropriate in accordance with paragraph 73 of the NPPF. Paragraph 029 states that's the purpose of the 5YHLS is to provide an indication of whether there are sufficient sites available to meet the housing requirement set out in adopted strategic policies for the next five years.
- 3.17 Paragraph 030 clarifies that housing requirement figures identified in strategic policies should be used as the starting point for calculating the 5YHLS figure for the first five years of the plan, and where the strategic housing policies plans are more than five years old, but have been reviewed and are not in need of updating.
- 3.18 Paragraph 030 also advises that authorities can use evidence such as a Strategic Housing Land Availability Assessment (SHLAA) / Housing and Economic Land Availability Assessment (HELAA) which will identify sites which may be suitable, available and achievable for housing development and also provide some evidence as to their deliverability. Sites should be reviewed and their status updated each year in the Authority Monitoring Report and Annual Position Statement (if the five year position is being confirmed).
- 3.19 Further advice is presented in paragraph 030 that in order to demonstrate 5 years' worth of deliverable housing sites, strategic policy-making authorities will need to provide robust, up to date evidence to support plan preparation. Judgments on deliverability of housing sites, including windfall sites, will need to be clearly and transparently set out. Authorities may also consider how they can involve people with an interest in delivery in assessing the deliverability of sites. They may develop benchmarks and assumptions based on evidence of past trends for development lead-in times and build-out rates. Testing these assumptions with developers and using them to inform assessments of deliverability can also make deliverability assessments more robust.
- 3.20 Reference is made in paragraph 33 of the guidance to stepped trajectories. Paragraph 34 sets out that a stepped requirement may be appropriate where there is to be a significant change in the level of housing requirement between emerging and previous policies and/or where strategic sites will have a phased delivery or are likely to be delivered later in the plan period. Strategic policy makers will need to set out evidence to support using stepped requirement figures, and not seek to unnecessarily delay meeting identified development needs.
- 3.21 Paragraph 036 helps to clarify what a deliverable site is as defined in Annex 2 of the Framework. It states that for sites with outline planning permission, permission in principle, allocated in a development plan or identified on a brownfield register, where clear evidence is required to demonstrate that housing completions will begin on site within 5 years, this evidence may include:
- Any progress being made towards the submission of an application
 - Any progress with site assessment work; and
 - Any relevant information about site viability, ownership constraints or infrastructure provision.

It sets out that for example this could be a statement of common ground between the local planning authority and the site developer (s) which confirms the developers' delivery intentions and anticipated start and build-out rates. Additionally, another example could be a hybrid

planning permission for large sites which links to a planning performance agreement that sets out the timescale for conclusion of reserved matters applications and discharge of conditions.

3.22 Paragraph 039 states that if an authority cannot demonstrate a 5 year land supply, plus any relevant buffer, the presumption in favour of sustainable development will apply, as set out in Footnote 7 of the Framework to enable the development of alternative sites to meet the policy requirement.

3.23 Paragraph 044 clarifies that any deficit or shortfall will need to be calculated from the base date of the adopted plan and should be added to the plan requirements for the next five year period (Sedgefield approach). If a strategic-policy making authority wishes to deal with past under delivery over a longer period, then a case may be made as part of the plan-making and examination process rather than on a case by case basis at appeal.

3.24 The guidance states in paragraph 045 that where areas deliver more completions than required the additional supply can be used to offset any shortfalls against requirements from previous years.

3.25 Paragraph 048 sets out what information annual reviews of 5 year land supply are expected to include (including annual position statements) as follows:

- For sites with detailed planning permission details of numbers of homes under construction and completed each year; where delivery has either exceeded or not progressed as expected; commentary indicating reasons for acceleration or delays to commencement on site or effects on build out rates;
- For small sites details of current planning status and record of completions and homes under construction by site;
- For sites with outline consent or allocated in adopted plans (or with PiP identified on Part 2 of brownfield land registers and where included in 5YHLS) information and clear evidence that there will be housing completions on site within 5 years including current planning status, timescales and progress towards detailed permission;
- Permissions granted for windfall development by year and how this compares with the windfall allowance;
- Details of demolitions and planned demolitions which will have an impact on net completions;
- Total net completions from plan base date by year (broken down into types of development including affordable housing) and
- The 5YHLS calculation clearly indicating buffers and shortfalls and the number of years of supply.

3.26 Paragraph 049 of the guidance sets out that the NPPF gives local planning authorities the opportunity to demonstrate a confirmed 5 year supply. This needs to be done initially through the plan examination process and may then be refreshed annually following adoption (provided the Plan remains up to date) through the preparation of an Annual Position Statement. A buffer of 10% should be applied to ensure the supply is sufficiently flexible and robust over the 12 month period.

3.27 The guidance specifies in paragraph 065 that, in relation to the Housing Delivery Test, local planning authorities covered by a Spatial Development Strategy will be monitored against their requirement as set out in the individual borough for the purposes of the test where this requirement is less than five years old. Housing Delivery Test consequences will therefore apply to local planning authorities individually.

London Plan (2016)

3.28 An annual housing monitoring target of 641 units currently applies to the Borough and has been adopted through the 2016 London Plan. The 2013 London-wide Strategic Housing Land Availability Assessment (SHLAA) sets out the basis for the current target of 641 units per annum for Bromley.

3.29 The London Plan para 3.14A and Policy 3.3 specifies that minimum housing supply targets for each borough are set out from 2015 until 2025. For Bromley, this target is 641 dwellings per annum. These targets are informed by the GLA's Strategic Housing Market Assessment (SHMA) (2013) and London's housing land capacity as identified through the 2013 GLA Strategic Housing Land Availability Assessment (SHLAA). The SHLAA methodology is designed to identify capacity authoritatively in the distinct circumstances of London, including the limited stock of land and the uniquely pressurised land market and dependence on recycling brownfield land currently in existing uses. The methodology has been developed and refined over time through partnership working with boroughs and others involved in London housing as well as to reflect the principles of government guidance on preparation of SHLAAs nationally.

3.30 The London Plan (para 3.19A) observes that national policy requires boroughs to identify a supply of specific deliverable sites sufficient to provide 5 years' worth of housing against their requirements with an additional buffer of 5% moved forward from later in the plan period. In compiling their 5 year supply estimates boroughs should demonstrate that they have maximised the number of identified sites. However, given London's reliance on recycled land currently in other uses and the London SHLAA's evidence, it must be recognised that in addressing this national objective, capacity which elsewhere in the country would be termed "windfall" must here form part of the 5 year supply. In order to support the range of activities and functions required in London as set out in this Plan application of the 5% - 20% buffers should not lead to approval of schemes which compromise the need to secure sustainable development as required in the NPPF.

Draft London Plan 2017

3.31 Consultation on the Draft London Plan commenced on 1st December 2017 and closed in March 2018. Bromley Council has raised objections on housing land requirements and supply with specific objections over the capacity data in the 2017 SHLAA and its' phasing of development as have other authorities. An Examination in Public into the Draft London Plan commenced in January 2019 and will last until May 2019.

3.32 Set out below are some key elements included in the Draft London Plan related to housing land supply for the Borough. It is important to note at this point in time the Draft London Plan is the subject of significant unresolved objections, and therefore, in line with the NPPF, it is considered to have limited weight.

3.33 Draft Policy H1 Increasing housing supply includes ten year targets for net housing completions in Table 4.1. The ten year target (2019/20 – 2028/29) for Bromley Borough is 14,240 units (1,424 annualised). Table 4.2 sets out ten year targets for net completions on small sites (below 0.25ha), for Bromley the target is 10,290 units (1,029 annualised). Paragraph 4.1.8 states boroughs are supported in using windfall assumptions in their five-year trajectories based on the numbers set out in Table 4.2. Paragraph 4.3.3 sets out that housing completions against

the London Plan small sites target are likely to increase over time as Policy H2 Small Sites is implemented so this should be taken into account when monitoring housing delivery during the early years of the Plan.

Bromley Local Plan 2019 and Five Year Housing Land Supply

3.34 The Council received the Inspector's Report on the Examination of the Bromley Local Plan on 11th December 2018. The Council agreed to adopt the consolidated Local Plan on the 16th January 2019. Policy 1 Housing Supply specifies that the Council will make provision for a minimum average of 641 additional homes per annum. Through the Local Plan process, the Borough has sought to identify allocations for housing and mixed-uses, taking into account the minimum target figure for the Borough of 641 units per annum. A number of adopted allocations are included in the 2019 5YHLS.

3.35 The Inspector examining the Plan had the following observations on housing supply requirements. The Inspector's Report into the Examination of Bromley's Local Plan states in paragraphs 18- 20 that:

[18]. The NPPF states that to boost significantly the supply of housing, local planning authorities should ensure that their local plans meet the full Objectively Assessed Need (OAN) for market and affordable housing in the housing market area, as far as is consistent with its policies. The current London Plan does not expect Boroughs to identify their own OAN, but rather policy 3.3 states that Boroughs should seek to achieve and exceed the relevant minimum annual average target in Table 3.1. Where possible, this should be augmented with extra housing capacity to close the gap between identified housing need, as set out in policy 3.8 to provide a genuine choice of homes, and supply, in line with the requirement of the NPPF.

[19]. For Bromley, the annual monitoring target to 2025 in Table 3.1 is 641 dpa, with a total of 6,413 for the 10 year period. Rolled forward to 15 years the London Plan target would be 9,615 dwellings with Appendix 10.1 of the Local Plan identifying a supply of 10,645 dwellings, exceeding the target by over 1,000 dwellings. MM001 and MM016 are required to the supporting text to policy 1 at paragraph 2.1.5a to address concerns how the Plan would close the gap between identified need and current supply, as required by policy 3.3D of the London Plan.

[20] "Any backlog in providing housing across London as a whole would be addressed in the next London-wide assessment of housing need. The NLP (New London Plan) is currently being examined, with housing requirements for the LBs based on a Strategic Housing Market Assessment (SHMA) and a Strategic Housing Land Availability Assessment (SHLAA), dated 2017, and the view has been expressed that the policy-based housing target in the NLP should be adopted in this Plan. However, the final version of the Plan is not yet known and the new housing target for Bromley has not yet been settled, since it is a matter of dispute between the Council and the GLA, and therefore has little weight. This plan has to be in conformity with the current London Plan, including the figures for housing need, and therefore the policy-based housing target in policy 1 is justified. Once the NLP is published the Council will need to consider the implications for the Borough's housing land supply and decide whether an update or partial update of this Plan is required. This is already set out in the Council's Local Development Scheme".

3.36 In light of the above the current London Plan (2016) is the relevant London Plan to take into consideration for housing supply targets for the Borough (currently 641 units per annum

minimum). The London Plan informs Policy 1 Housing Supply of the recently adopted Local Plan that specifies the Council will make provision for a minimum average of 641 additional homes per annum over the ten year plan period and where possible over the fifteen year plan period.

3.37 Paragraph 47 of the PPG states that:

“The examination of development plan documents which allocate housing sites will include consideration of the deliverability of sites to meet a 5 year supply, in a way that cannot be replicated in the course of determining individual applications and appeals where only the applicant’s/appellant’s evidence is likely to be presented to contest an authority’s position”.

3.38 In the context of the above paragraph the Inspector’s Report on the Examination of the Bromley Local Plan concludes in paragraphs 41 and 42 on housing delivery and 5 year supply (based on submission documents to the local plan Examination relating to housing land supply matters 2016 and 2017) as follows:

“41. If further housing land had been allocated in the Plan, there would have been more flexibility in terms of the 5YHLS and a greater contribution would have been made to “closing the gap” and boosting the supply of housing in Bromley. Arguably, there would also have been more affordable housing available, depending on the sites concerned. There have been times in the recent past when development has been allowed on appeal when Inspectors expressed concerns about housing delivery in the Borough. However, allocations in the Plan provide a reasonable prospect for a 5YHLS, subject to 5 year reviews.

42. The release of further housing land would have been likely to require a different strategy than that adopted in the Plan, particularly in respect of the release of Green Belt land for housing. However, the strategy adopted in the Plan is in general conformity with the London Plan 2016, in protecting Green Belt land and developing housing at high density in accessible locations, mostly in existing urban areas.”

3.39 The updated Five Year Housing Land Supply Paper (April 2019) attached at Appendix 1 of this report includes an assessment of the various sources of housing supply that are now considered deliverable over the five year period. These include;

- (i) Relevant adopted allocations in the Bromley Local Plan;
- (ii) Large and small sites with planning permission;
- (iii) Non-self-contained units and;
- (iv) Allowances for small sites, vacant units and change of use from office to residential.

It concludes that a supply of 3365 units is needed over the five year period in line with guidance set out in the NPPF and PPG. The number of units considered deliverable over the period is 3752. Consequently it concludes that there is a deliverable five year housing supply in the Borough.

4. POLICY IMPLICATIONS

4.1 The five year supply position is important to establish how the Borough is performing in terms of housing completions and future housing supply. The NPPF (February 2019) specifies that housing applications should be considered in the context of the presumption in favour of sustainable development. As set out above the policies which are most important for determining the application are considered out-of-date if the local planning authority cannot demonstrate a five-year supply of deliverable housing sites. Footnote 7 advises that this includes, for applications involving the provision of housing, situations where the local planning authority cannot demonstrate a five year supply of deliverable housing sites (with the

appropriate buffer) or where the Housing Delivery Test indicates that the delivery of housing was substantially below (less than 75%) of the housing requirement over the previous three years. Transitional arrangements currently apply as set out in Annex 1 of the Framework.

- 4.2 In such instances paragraph 11 d) of the NPPF advises that planning permission should be granted unless the application of policies in the Framework that protect areas or assets of particular importance provides a clear reason for refusing the development proposed; or any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.
- 4.3 Where planning permission is refused and the housing land supply position of the Borough at the time is questioned by applicants, they can raise the matter in the context of the S78 appeal process.

5.0 FINANCIAL AND PERSONNEL IMPLICATIONS

- 5.1 The Five Year Housing Supply Paper should be updated and produced annually. Failure to produce the paper at all could result in significant resource implications in both financial and staffing terms, as the number of hearings and public inquiries related to housing supply issues could increase substantially, if a five year supply of housing cannot be demonstrated.
