PAGE 305 - DESCRIPTION OF PETTS WOOD AREA OF SPECIAL RESIDENTIAL CHARACTER CARRIED FORWARD FROM THE UNITARY DEVELOPMENT PLAN

3. Petts Wood – The area includes circa 1500 dwellings within detached and semi-detached properties on circa 112 ha of land. It is bounded by the railway to the north, Chislehurst Road Conservation Area to the north east, tree preservation orders and the railway to the north west and the west (excluding Urban Open Space, properties within Petts Wood Station Square Conservation area and other areas which include retail and car parking uses), part of St John's Road to the south west, the Chenies Conservation Area and residential areas considered to be of distinct character and/or standard to the south and west of Crofton Lane and east of Grosvenor Road.

The original plans for Petts Wood date from the late 1920s and the early 1930s. Whilst there have been some changes post war the prevailing design of the buildings is from the 1930s and remains largely intact. Some of the properties have been built by the distinguished designer Noel Rees who designed all of the building within the neighbouring Chenies Conservation area. Whilst houses were built over a number of years, in a number of similar though varied styles, the road layout and plot sizes were established in an overall pattern, following the garden suburb principle which largely remains intact today. The large plots which are spaciouly placed were originally designed following the garden suburb principle by developer Basil Scruby. The regularity of front building and rear building lines, the consistency in the front roof lines largely untouched by roof extensions or conversions and the symmetry between pairs and neighbouring pairs of houses are of importance in defining the character of the area. The Petts Wood ASRC has an open, suburban and semi-rural feel, predicated by low boundaries and visible front gardens set back from the road as well as the width of the separation between the houses which is of a particularly high standard. This allows many of the trees and greenery which prevail throughout the area to be seen from the street. Large rear gardens also provide the area with a high level of amenity. The plot sizes, the alignment of the houses to the Garden Suburb principle underline the character, rhythm, symmetry and spatial standards of the ASRC.

The separation between building and the rhythm and pattern of the houses adds to the special character. In many cases there is a much wider separation between houses than in other parts of the Borough which demands a higher degree of separation between buildings to maintain the special character, the openness and feel of the area. Where there are pairs of houses that complement the rhythm of the street scene there is also a prevailing symmetry between the houses. This symmetry can also be seen between neighbouring pairs. The plots are set out in such a way that the spacious character is of a clear detached and semi-detached nature. The front roof lines also enhance the character of the area being largely untouched by roof extensions and conversions at the front.

This allows many of the trees and greenery which prevail throughout the area to be seen from the street scene. Large rear gardens often in excess of 120ft are a feature of the ASRC and provide the area with a high level of amenity and contribute to nature conservation.
