<a href="#">Feed-In Tariffs</a>	Feed-In Tariffs are a payment for low carbon renewable energy electricity generation. Eligible renewable energy generators are paid a fixed rate for any electricity they produce and use (generation tariff) by energy suppliers. Additional income is earned if any surplus energy is exported back to the national grid (export tariff). Most forms of renewable electricity generated up to 5 megawatts are eligible. FITs are for anyone who generates their own energy onsite, be that a home, school or business.	<a href="http://www.fitariffs.co.uk/">http://www.fitariffs.co.uk/</a>
<a href="#">Renewable Heat Incentive</a>	As of July 2011 the Renewable Heat Incentive will come into force. RHI are a payment for low carbon renewable energy heat generation. After installation of a renewable heat system an estimate is made as to how much heat will be produced and a fixed payment amount based on the estimate is agreed. RHI is for everyone: schools, businesses, households etc.	<a href="http://www.rhincentive.co.uk/">http://www.rhincentive.co.uk/</a>
<a href="#">Partnership for Renewables (Carbon Trust)</a>	Partnerships for Renewables, a subsidiary of Carbon Trust Enterprises Limited, works exclusively with the public sector to develop and manage onsite renewable energy projects.	<a href="http://www.pfr.co.uk/">http://www.pfr.co.uk/</a>
<a href="#">London Green Fund</a>	The LGF will provide funding for two UDFs that will invest directly in waste and energy efficiency projects. The waste UDF (Foresight Environmental Fund) is currently operational, and £35 million has been allocated to it from the LGF. The Energy Efficiency UDF fund is expected to be up and running by summer 2011.	<a href="http://www.lda.gov.uk/our-work/european-funds/ERDF/jessica/index.aspx">http://www.lda.gov.uk/our-work/european-funds/ERDF/jessica/index.aspx</a>
<a href="#">RE:FIT</a>	The purpose of RE:FIT is to assist public bodies in London to significantly reduce carbon emissions from their buildings. A framework of pre-selected energy service companies (ESCo) is provided to retro-fit energy efficiency measures in buildings. The ESCo guarantees a set level of energy and cost savings over an agreed payback period, thus providing a net saving longer term.	<a href="http://www.lda.gov.uk/projects/refit/index.aspx">http://www.lda.gov.uk/projects/refit/index.aspx</a>
